ELSEVIER

Comput. Methods Appl. Mech. Engrg. 159 (1998) 399–402

Computer methods in applied mechanics and engineering

Subject Index of Volume 159

Boundary element methods
Unit-impulse response of unbounded medium by scaled boundary finite-element method, J.P. Wolf and C. Song 355–367

Composite materials
Investigation of the interactions between the numerical and the modeling errors in the Homogenized Dirichlet Projection Method, N. Moës, J.T. Oden and T.I. Zohdi 79–101

Conformal mapping
Branched channel free-streamlines, W.C. Hassenpflug 329–354

Coupled problems
Unit-impulse response of unbounded medium by scaled boundary finite-element method, J.P. Wolf and C. Song 355–367

Dynamics
Numerical modelling of large deformation in metal powder forming, R.W. Lewis and A.R. Khoei 291–328
Unit-impulse response of unbounded medium by scaled boundary finite-element method, J.P. Wolf and C. Song 355–367

Elasticity
Investigation of the interactions between the numerical and the modeling errors in the Homogenized Dirichlet Projection Method, N. Moës, J.T. Oden and T.I. Zohdi 79–101
Modeling via differential quadrature method: Three-dimensional solutions for rectangular plates, K.M. Liew and T.M. Teo 369–382

Electromagnetic fields
Optimal design of periodic peizocomposites, E.C. Nelli Silva, J.S.O. Fonseca and N. Kikuchi 49– 77

Electronics
Optimal design of periodic peizocomposites, E.C. Nelli Silva, J.S.O. Fonseca and N. Kikuchi 49– 77

Finite element and matrix methods
A general framework for the numerical solution of problems in finite elasto-plasticity, P. Papadopoulos and J. Lu 1– 18
A posteriori error estimation of steady-state finite element solutions of the Navier–Stokes equations by a subdomain residual method, H. Jin and S. Prudhomme 19– 48
Optimal design of periodic peizocomposites, E.C. Nelli Silva, J.S.O. Fonseca and N. Kikuchi 49– 77

Elastoplastic consolidation at finite strain. Part 2: Finite element implementation and numerical examples, R.I. Borja, C. Tamagnini and E. Alarcón 103–122
Investigation of the interactions between the numerical and the modeling errors in the Homogenized Dirichlet Projection Method, N. Moës, J.T. Oden and T.I. Zohdi 79–101
A study of strain localization in a multiple scale framework—The one-dimensional problem, K. Garikipati and T.J.R. Hughes 193–222
A formulation of finite elastoplasticity based on dual co- and contra-variant eigenvector triads normalized with respect to a plastic metric, C. Miehe 223–260
Numerical modelling of large deformation in metal powder forming, R.W. Lewis and A.R. Khoei 291–328
Unit-impulse response of unbounded medium by scaled boundary finite-element method, J.P. Wolf and C. Song 355–367
Numerically robust 3-D finite element Reynolds Averaged Navier–Stokes solver for the study of turbulent supersonic external flows, A. Matesanz, A. Velázquez, A. Jiménez and M. Rodríguez 383–394

Fluid mechanics
Branched channel free-streamlines, W.C. Hassenpflug 329–354

Gas dynamics
A high-order streamline Godunov scheme for steady supersonic/hypersonic equilibrium flows, J.-Y. Yang, Y.-H. Tang and S.-T. Lee 261–289

Incompressible and near incompressible media
A formulation of finite elastoplasticity based on dual co- and contra-variant eigenvector triads normalized with respect to a plastic metric, C. Miehe 223–260

Material physics
A formulation of finite elastoplasticity based on dual co- and contra-variant eigenvector triads normalized with respect to a plastic metric, C. Miehe 223–260

Nonlinear dynamics of systems
A high-order streamline Godunov scheme for steady supersonic/hypersonic equilibrium flows, J.-Y. Yang, Y.-H. Tang and S.-T. Lee 261–289

Nonlinear mechanics
A general framework for the numerical solution of problems in finite elasto-plasticity, P. Papadopoulos and J. Lu 1– 18
Elastoplastic consolidation at finite strain. Part 2: Finite element implementation and numerical examples, R.I. Borja, C. Tamagnini and E. Alarcón 103–122
A study of strain localization in a multiple scale framework—The one-dimensional problem, K. Garikipati and T.J.R. Hughes 193–222
A formulation of finite elastoplasticity based on dual co- and contra-variant eigenvector triads normalized with respect to a plastic metric, C. Miehe 223–260
Numerical modelling of large deformation in metal powder forming, R.W. Lewis and A.R. Khoei 291–328

Numerical solution procedures
A posteriori error estimation of steady-state finite element solutions of the Navier–Stokes equations by a subdomain residual method, H. Jin and S. Prudhomme 19– 48
Optimal design of periodic peizocomposites, E.C. Nelli Silva, J.S.O. Fonseca and N. Kikuchi 49– 77

Elastoplastic consolidation at finite strain. Part 2: Finite element implementation and numerical examples, R.I. Borja, C. Tamagnini and E. Alarcón 103–122
Investigation of the interactions between the numerical and the modeling errors in the Homogenized Dirichlet Projection Method, N. Moës, J.T. Oden and T.I. Zohdi 79–101
A formulation of finite elastoplasticity based on dual co- and contra-variant eigenvector triads normalized with respect to a plastic metric, C. Miehe 223–260
A high-order streamline Godunov scheme for steady supersonic/hypersonic equilibrium flows, J.-Y. Yang, Y.-H. Tang and S.-T. Lee 261–289
Numerical modelling of large deformation in metal powder forming, R.W. Lewis and A.R. Khoei 291–328
Unit-impulse response of unbounded medium by scaled boundary finite-element method, J.P. Wolf and C. Song 355–367
Modeling via differential quadrature method: Three-dimensional solutions for rectangular plates, K.M. Liew and T.M. Teo 369–382

Optimization and design of structures
Optimal design of periodic peizocomposites, E.C. Nelli Silva, J.S.O. Fonseca and N. Kikuchi 49– 77
A study of strain localization in a multiple scale framework—The one-dimensional problem, K. Garikipati and T.J.R. Hughes 193–222

Plasticity
A general framework for the numerical solution of problems in finite elasto-plasticity, P. Papadopoulos and J. Lu 1– 18
Elastoplastic consolidation at finite strain. Part 2: Finite element implementation and numerical examples, R.I. Borja, C. Tamagnini and E. Alarcón 103–122
A study of strain localization in a multiple scale framework—The one-dimensional problem, K. Garikipati and T.J.R. Hughes 193–222
A formulation of finite elastoplasticity based on dual co- and contra-variant eigenvector triads normalized with respect to a plastic metric, C. Miehe 223–260
Numerical modelling of large deformation in metal powder forming, R.W. Lewis and A.R. Khoei 291–328

Problems in physics
A formulation of finite elastoplasticity based on dual co- and contra-variant eigenvector triads normalized with respect to a plastic metric, C. Miehe 223–260

Shells and plates
A formulation of finite elastoplasticity based on dual co- and contra-variant eigenvector triads normalized with respect to a plastic metric, C. Miehe 223–260
Modeling via differential quadrature method: Three-dimensional solutions for rectangular plates, K.M. Liew and T.M. Teo 369–382

Solution of differential equations
A formulation of finite elastoplasticity based on dual co- and contra-variant eigenvector triads normalized with respect to a plastic metric, C. Miehe 223–260
Branched channel free-streamlines, W.C. Hassenpflug 329–354
Modeling via differential quadrature method: Three-dimensional solutions for rectangular plates, K.M. Liew and T.M. Teo 369–382

Solutions of ordinary and partial differential equations
Incremental unknowns, multilevel methods and the numerical simulation of turbulence, T. Dubois, F. Jauberteau and R. Temam 123–189

A formulation of finite elastoplasticity based on dual co- and contra-variant eigenvector triads normalized with respect to a plastic metric, C. Miehe 223–260

Stability in fluid mechanics
Incremental unknowns, multilevel methods and the numerical simulation of turbulence, T. Dubois, F. Jauberteau and R. Temam 123–189

Structural mechanics
A formulation of finite elastoplasticity based on dual co- and contra-variant eigenvector triads normalized with respect to a plastic metric, C. Miehe 223–260
Unit-impulse response of unbounded medium by scaled boundary finite-element method, J.P. Wolf and C. Song 355–367
Modeling via differential quadrature method: Three-dimensional solutions for rectangular plates, K.M. Liew and T.M. Teo 369–382

Subsonic flow
A posteriori error estimation of steady-state finite element solutions of the Navier–Stokes equations by a subdomain residual method, H. Jin and S. Prudhomme 19– 48
Incremental unknowns, multilevel methods and the numerical simulation of turbulence, T. Dubois, F. Jauberteau and R. Temam 123–189

Supersonic flow
A high-order streamline Godunov scheme for steady supersonic/hypersonic equilibrium flows, J.-Y. Yang, Y.-H. Tang and S.-T. Lee 261–289
Numerically robust 3-D finite element Reynolds Averaged Navier–Stokes solver for the study of turbulent supersonic external flows, A. Matesanz, A. Velázquez, A. Jiménez and M. Rodríguez 383–394

Turbulence
Incremental unknowns, multilevel methods and the numerical simulation of turbulence, T. Dubois, F. Jauberteau and R. Temam 123–189

Numerically robust 3-D finite element Reynolds Averaged Navier–Stokes solver for the study of turbulent supersonic external flows, A. Matesanz, A. Velázquez, A. Jiménez and M. Rodríguez 383–394

Viscoelastic and viscoplastic media
A study of strain localization in a multiple scale framework—The one-dimensional problem, K. Garikipati and T.J.R. Hughes 193–222

Viscous flow
A posteriori error estimation of steady-state finite element solutions of the Navier–Stokes equations by a subdomain residual method, H. Jin and S. Prudhomme 19– 48
Incremental unknowns, multilevel methods and the numerical simulation of turbulence, T. Dubois, F. Jauberteau and R. Temam 123–189

Wave motion
Unit-impulse response of unbounded medium by scaled boundary finite-element method, J.P. Wolf and C. Song 355–367

Workhardening structures
A formulation of finite elastoplasticity based on dual co- and contra-variant eigenvector triads normalized with respect to a plastic metric, C. Miehe 223–260
